

OVERVIEW

Levels that measure proven expertise

The Ranqlet Level System is a reputation-based progression framework that determines a user's expertise, credibility, and permissions within the platform. Unlike traditional gamification, levels are earned through **meaningful contributions** and **accurate community participation** — not simply time spent on the platform.

 Build

Build quality projects.

 Review

Review projects fairly.

 Grow

Grow expertise in specific niches.

1 Objectives

Reward consistent contributors.

Ensure experienced builders review less experienced builders.

Prevent spam and fake ratings.

Create long-term engagement.

Build a trustworthy reputation ecosystem.

2 Two Independent XP Systems

① OVERALL XP

Represents a user's complete contribution across the platform.

- Overall Level
- Global Leaderboards
- Seasonal Rank
- Lifetime Rank
- Platform Reputation

② NICHE XP

Each niche tracks its own independent XP — a user can hold different levels in different niches.

- Web Development
- Product Management · UI/UX · AI/ML
- Data Science · Cyber Security
- Graphic Design · Marketing · DevOps

Example builder profile — Overall XP: 10,000 Lv4

Web Development		4,000 XP · Lv3
Product Mgmt		3,000 XP · Lv3
UI/UX		2,000 XP · Lv2
AI/ML		1,000 XP · Lv2

This user is an advanced Web Developer but only an intermediate AI/ML contributor.

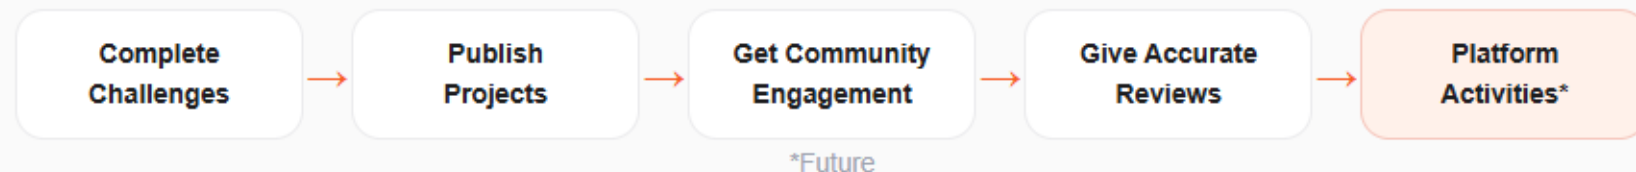

PROGRESSION

Exponential level progression

XP required grows exponentially at every level — keeping higher levels prestigious and difficult to achieve.

Level	XP Required to Reach Next Level	Total XP Required
Lv1	1,000	1,000
Lv2	2,000	3,000
Lv3	4,000	7,000
Lv4	8,000	15,000
Lv5	16,000	31,000
Lv6	32,000	63,000
Lv7	64,000	127,000
Lv8	128,000	255,000
Lv9	256,000	511,000
Lv10	512,000	1,023,000

3 How Users Earn XP

4 Challenge Difficulty Rewards

XP rewards scale with both the reviewer's level and the challenge difficulty — higher levels earn proportionally more.

Level 2 Reviewer

Easy	+50 XP
Medium	+80 XP
Hard	+120 XP

Level 3 Reviewer

Easy	+65 XP
Medium	+100 XP
Hard	+150 XP

REVIEW SYSTEM

Who reviews whom

A user can only review projects within their niche expertise. The review range is set by the reviewer's **Niche Level** — not their Overall Level — covering their own level and up to two levels below.

5 Review Range Example — Web Development Lv5

Lv6

Cannot review — above reviewer's level

Lv5

Reviewer's own level — can review

Lv4

One level below — can review

Lv3

Two levels below — can review

Lv2

Cannot review — outside eligible range

Another example: a Product Management Lv3 reviewer can review Lv3, Lv2, and Lv1 projects — ensuring experienced builders review newer builders while keeping enough reviewers available.

6 Reviewer Assignment

Projects are assigned automatically — users cannot manually select which projects to review. Assignment considers:

 Matching niche

 Eligible level range

 Projects with fewer reviews

 Previous review history

 Anti-repeat rules

 Anti-collusion rules

7 Rating Validation

Every project has a hidden Evaluation Band — reviewers are never shown the target range.

EXAMPLE

Hidden Evaluation Band

5 – 8

 **Accurate Rating**

6

Falls inside the band — reviewer earns XP.

 **Inaccurate Rating**

10

Falls outside the band — reviewer receives an XP penalty.
